splashlaser

Splash Laser Hair Removal.

The Splash Laser works by projecting a beam of light which penetrates through the upper layers of the skin to the hair follicle. The laser is calibrated to target the pigment (melanin) in the growing hair. The light energy is converted into heat and destroys the hair without damaging the surrounding tissue.

Splash only uses diode lasers. These are specifically designed to remove unwanted hair faster, with less discomfort and more reliability than other methods. Scientific tests carried out by U.S regulators consistently prove that Splash Laser is at least twice as effective as pulse light treatments so you are guaranteed better results and better value at Splash Day Spa.

Answers to some frequently asked questions

If Splash Laser is better, will it cost more?

No. In fact you can expect better value. The benefit of Splash Laser means you will need less visits to remove unwanted hair than with other techniques. Less treatments, greater results.

How many treatments will I need?

The amount of treatments required will vary, however, for most people an average of six sessions are required to permanently reduce hair.
